Cave Expedition

Imagine you are a speleologist preparing to map a new cave system.

What equipment will you need to take on your journey?

You have reached the main cave through the tourist entrance. Describe what you see there:

You are now leaving the explored section and have climbed down to places where the roof is getting lower and lower. You eventually reach a huge cavern with several tunnels leading off from it. Describe what you might see this far underground.

Draw a map of the underground, starting from the tourist entrance. Don't forget to include piles of rock, tunnels and cave formations.
