

Dive Data

While most whales find their food in the top 100 metres of the ocean, they are able to dive much deeper than this. Sperm whales are incredible divers. Their dives last about an hour and some have been known to dive as deep as 2250 metres!

Represent the following dive data on the graph provided.

Dall's porpoise	100 metres
Pacific white-sided dolphin	200 metres
Beluga whale	300 metres
Bottlenose dolphin	500 metres
Pilot whale	600 metres
Sperm whale	1000 metres

Can you think of another way to display this data?
